Rapidly diagnose acute conjunctivitis

Acute conjunctivitis affects nearly 6.9 million Americans each year, with 1 in 4 testing positive for the Adenovirus.1 Approximately 50% of cases are misdiagnosed which could result in significant morbidity in patients.2

AdenoPlus is the first rapid, CLIA-waived point-of-care test that detects all known serotypes of Adenoviral conjunctivitis. An early and accurate diagnosis with AdenoPlus may prevent serious complications in the future and with AdenoPlus you can make a rapid, accurate diagnosis before the patient leaves your office.

Clinical benefits
- Identify, isolate and manage contagious patients, preventing spread to other patients and staff.
- Reduce levels of inappropriate antibiotic use.
- Reduce costs associated with acute conjunctivitis by 40%.

Fast and accurate
- Results in 10 minutes.
- 90% sensitivity and 96% specificity.

Easy and convenient
- Disposable test, requires just 4 easy steps.
- No additional equipment is needed to administer or interpret.
4-Step Procedure

<table>
